

Halofilní řasy a sinice

Petr Marvan, Markéta Frámková, Jiří Heteša

Systém halobií

Druhy	koncentrace NaCl (mg/l)
• Polyhalobní	přes 30 000
• Euryhalinní	200 - 30 000
• a-mesoalobní	10 000 - 30 000
• b-mesohalobní	200 - 10 000
• halofilní	do 200
• indiferentní	různá
• halofobní	do 10 ?

Kde se můžeme se slanomilnými řasami a sinicemi v ČR setkat

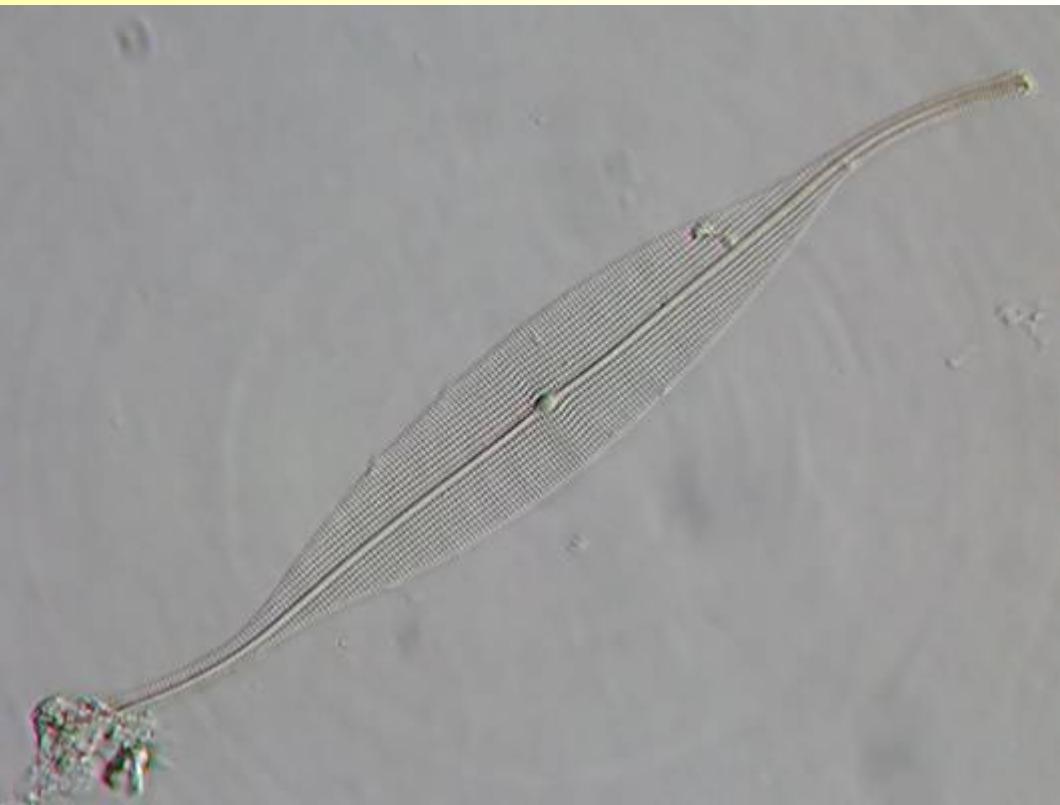

Původní

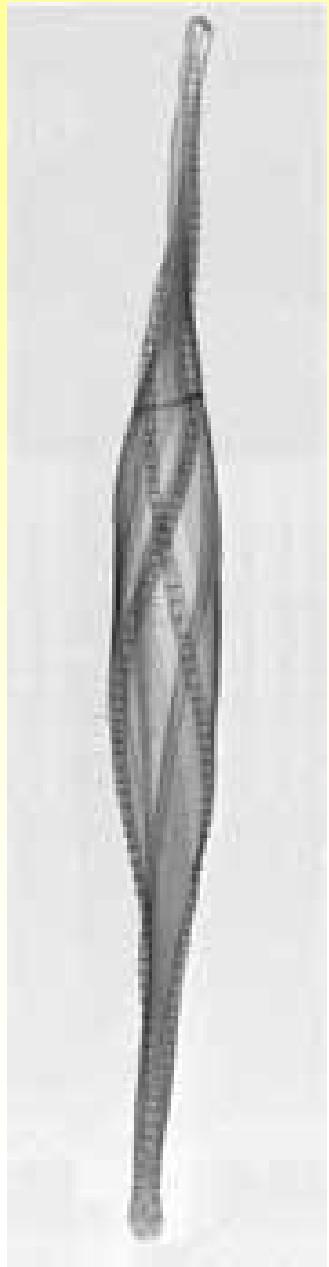

- a. Minerální (zejm. termální) prameny a toky pod jejich zaústěním: např. Karlovy Vary, lokalita "Soos" u Františkových Lázní; na Slovensku např. Piešťany, Sivá Brada, Liptovký Sv. Ján
- b. Jižní Morava (sem zasahuje oblast výskytu halofytů z Panonské nížiny)

Druhotné

- c. Oblasti těžby: např. Mostecko, Ostravsko, Oslavany (Neslovický potok)
- d. Elektrárny (chladicí věže; mj. i pod JE Dukovany)
- e. Ale i jinde (invaze *Enteromorpha* v 80. letech; invaze *Actinocyclus normanii* v 90. letech)

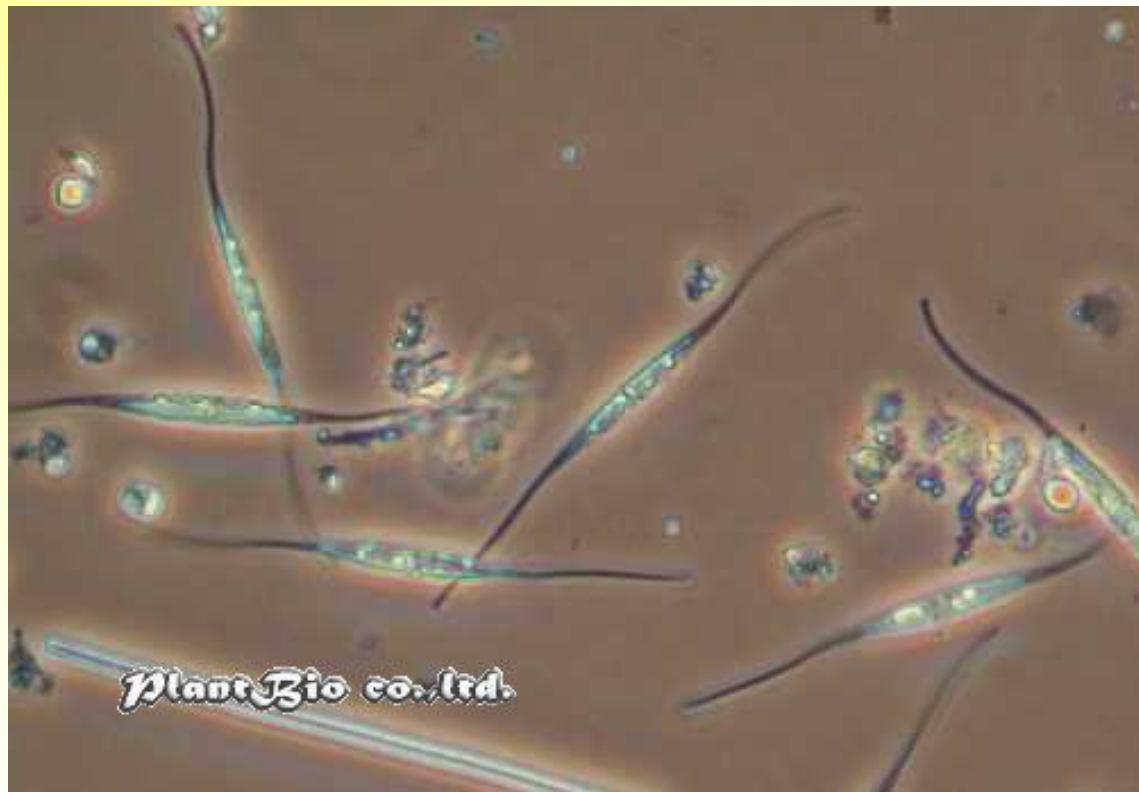

Gyrosigma fasciola

Cylindrotheca gracilis

Nitzschia reversa
